Projects

Rob's Bar and Grill | [Github](#) | [Deployed Site](#)

- Created functional website for restaurant complete with React framework to implement multiple pages.
- Utilized interchangeable hero section that displays featured restaurant marketing promotions.
- Incorporated embedded location Google Map feature.
- Built menu using nested modular component tree.

LiftoSphere | [Github](#) | [Deployed Site](#)

- Engineered social media application designed to connect gym-goers and allow them to share experiences and workouts. Users can browse posts from other users, leave likes, and comment on posts. Users can filter posts by workout (chest, shoulders, legs, etc.).
- Role included defining the models for posts, users, likes, and comments. Also responsible for the setup of the GraphQL request system as well as general webpage styling.

Portfolio | [Github](#) | [Deployed Site](#)

- Created a sleek and modern personal portfolio site.
- Created, organized, and designed all React components.
